TRAUMA HAWK • WEST PALM BEACH, FL

Hangar doors by Well Bilt Industries
Facility has two rolling door systems.

Trauma Hawk

A metal building and roof system from Star Building Systems were used to construct the 25,350 sq. ft. aeromedical facility, with administrative offices, helicopter hangar and maintenance area. The West Palm Beach, FL, project features two rolling door systems from Well Bilt Industries, built to satisfy Florida's 140 mph wind load. One door measured 95'6" x 20' and had six leaves, while the other 50' x 20' door had three leaves. Both were one-way door systems with telescoping top guides and operated by custom electric motor systems.

Construction began in January 2005. It was finished in February 2006 at a cost of over \$3.1 million. The general contractor was O'Connor & Taylor Inc. Southern Construction Systems SCS Inc. served as the erector and roofing contractor. The designer was MPA Architects Inc. All firms are based in West Palm Beach.
